

Sage Solutions for Logistics and Warehousing

Sage Solutions in Africa

Sage provides business software, services and support worldwide and is a powerhouse throughout Africa. A global company with more than 6 million customers and 13,600 employees, Sage boasts 25 years experience focusing on ERP (Enterprise Resource Planning) and CRM (Customer Relationship Management) Solutions.

Whilst in tune with our global reach, locally our success is built on understanding and meeting our customers' needs via a highly skilled network of Sage Business Partners spread across the African continent.

In an increasingly global marketplace many businesses are developing an international presence. As such they require robust solutions catering for multiple government legislations, currencies and languages. These solutions must offer integration and customisation over multiple platforms. Sage, as a global business, understands these challenges and provides ERP and CRM solutions to meet the demands of international businesses.

Our extensive range of solutions addresses the challenges of businesses in virtually any industry and enables our customers to manage and optimize their business processes with ease.

Through our industry focus we are positioned as the ERP and CRM visionary in Africa with solutions for small, medium and enterprise businesses.

Our ERP solutions include Sage ERP Accpac and Sage ERP X3 along with premium CRM solutions, Sage CRM and Sage SLX for profitable customer relationships.

We provide true end to end business management in a variety of industries including Financial and Distribution, Retail, Warehousing, Logistics, Service Management, HR/ Payroll, Manufacturing and Engineering.

Today more than 6 million businesses worldwide rely on Sage to manage their key business processes. We remain heavily focused on innovation and entrepreneurship in our people. Our locally focused approach ensures empowered decision making and local ownership for our customers wherever we operate.

Sage Solutions for Logistics and Warehousing

Managing a well oiled logistics operation without breaking the bank

High demands for better customer service, a very competitive landscape, and constant regulation changes all make the operation and provision of transport and logistics services a management challenge.

Understanding that Transport & Logistics companies have different needs from other organizations, our software offers a choice of solutions ranging from powerful ERP functionality, integrated warehousing, supply chain and logistics management, packing and quality assurance checking.

The key features that drive the success of an ERP implementation in this environment include:

Logistics and Warehousing:

- Advanced pick, pack and put-away rules facilitating multiple bins and location management, reducing manual intervention and increasing effectiveness.
- Management of loads by weight, volume or a combination thereof.
- Enablement of picking in bulk or pack size options, polarisation and shrink-wrapping.
- Handling of perishables, shelf-life days, expiry dates or controlled temperature environments.
- Powerful quality control and inspection management.
- Fully integration with RFID scanners and weighing scales, further tightening controls and streamlining efficiency.
- Integrated stock management, counting and controls giving users granular control over stock situations.

Operational:

- Easy to use web interface that utilizes graphically illustrated business process flows, reducing the processing time and burden on employees.
- Convenient graphical Dashboarding allowing users a snapshot of the data in their specific area of responsibility.
- Multiple language interface, making the system easier to use for both users and support staff.
- Powerful web based architecture, further enabling distributed operation and ease of rolling out to distributed locations.
- Powerful Webservices functionality allowing 3PL and 4PL companies to integrate into their clients individual ERP systems reducing the risk of manual errors.

Financial:

- Fully integrated financial modules allow the seamless transfer of data between the operational and financial modules.
- Full BI capability, giving users easy to understand reports that are delivered on time.
- Multiple currency and legislation management.
- Detailed security rights for users and audit trails further strengthening system security and transparency and reducing the risk of fraud.
- Intergration to TMS(Transport Management System)
- Integration to Route Optimisation
- Integration to Fleet Maintenance
